“We found Neo4j to be literally **thousands of times faster** than our prior MySQL solution, with queries that require **10-100 times less code**. Today, Neo4j provides eBay with **functionality that was previously impossible.**”

- Volker Pacher, Senior Developer

A way of representing data

Relational Database

Good for:

- Well-understood data structures that don't change too frequently
- Known problems involving discrete parts of the data, or minimal connectivity

Graph Database

Good for:

- Dynamic systems: where the data topology is difficult to predict
- Dynamic requirements: the evolve with the business
- Problems where the relationships in data contribute meaning & value

“

IT IS NOT THE STRONGEST OF THE SPECIES THAT **SURVIVE** NOR THE MOST INTELLIGENT BUT THE ONE **MOST RESPONSIVE TO CHANGE**

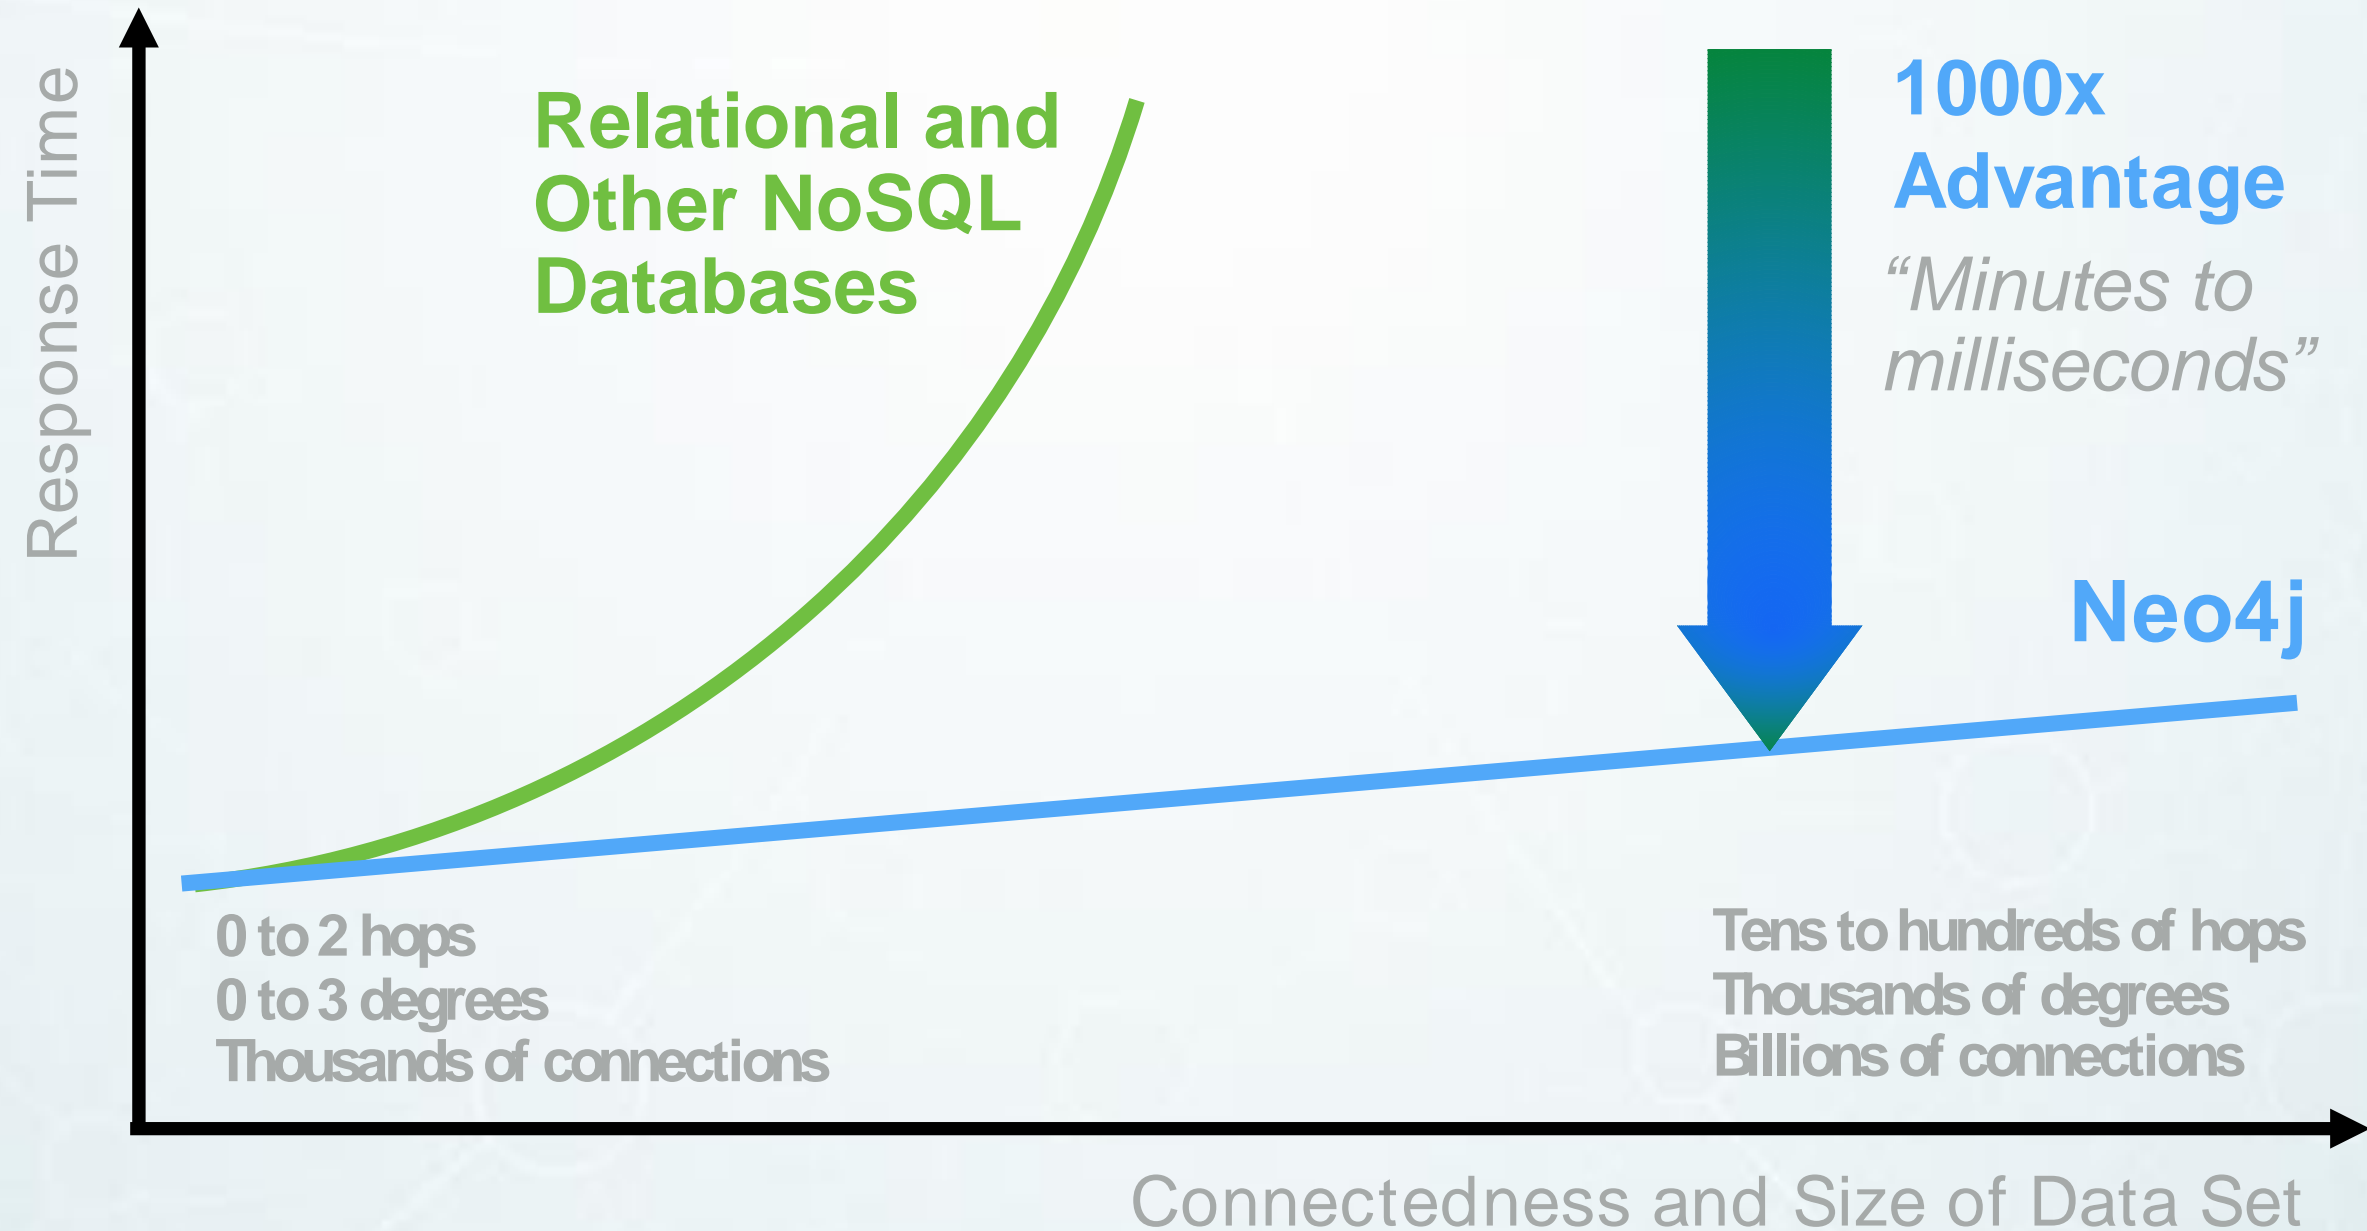

Charles Darwin (1809 - 1882)

A close-up photograph of a wooden cabinet drawer pulled out, filled with numerous index cards. The cards are organized into several distinct sections. A metal label on the front of the drawer reads "MRC EACHEM". The scene is lit with warm, golden light, creating a sense of a well-used, historical archive.

Seeking Life's Bare (Genetic) Necessities

COLD SPRING HARBOR, NEW YORK—How many genes does an organism need to survive? Last week at the genome meeting here,* two genome researchers with radically different approaches presented complementary views of the basic genes needed for life. One research team, using *comparative* analysis to compare known *actinomes*, concluded that today's *actinomes* can be sustained with just 252 genes, and that the earliest life forms required a mere 128 genes. The other researcher mapped genes in a simple parasite and estimated that for this organism, 800 genes are plenty to do the job—but that anything short of 100 wouldn't be enough.

Although the numbers don't match precisely, these *geneticists*...

“one not all that far apart,” especially in comparison to the 25,000 genes in the human genome, notes Steve Anderson, a geneticist at the University of California, San Diego, who was not at the meeting. “But coming up with a list of genes that can sustain life is a very difficult problem. It may be more than just a matter of counting genes. It may be a way of organizing any newly sequenced genome,” explains Arcady Mushegian, a computational molecular biologist at the National Center for Biotechnology Information (NCBI) in Bethesda, Maryland. Comparing the

Stripping down. Computer analysis yields an estimate of the minimum modern and ancient genomes.

Topic proportions and assignments

LDA Model from Blei (2011)

Topic models are based upon the idea that documents are mixtures of topics, where a topic is a probability distribution over words.

Blei, David M. 2011. "Introduction to Probabilistic Topic Models." *Communications of the ACM*.

Amazon apparently believes that my recent purchase of a couple of portable ceramic heaters was merely the initial move in a grand plan to corner the world market on portable ceramic heaters.

Chat to save

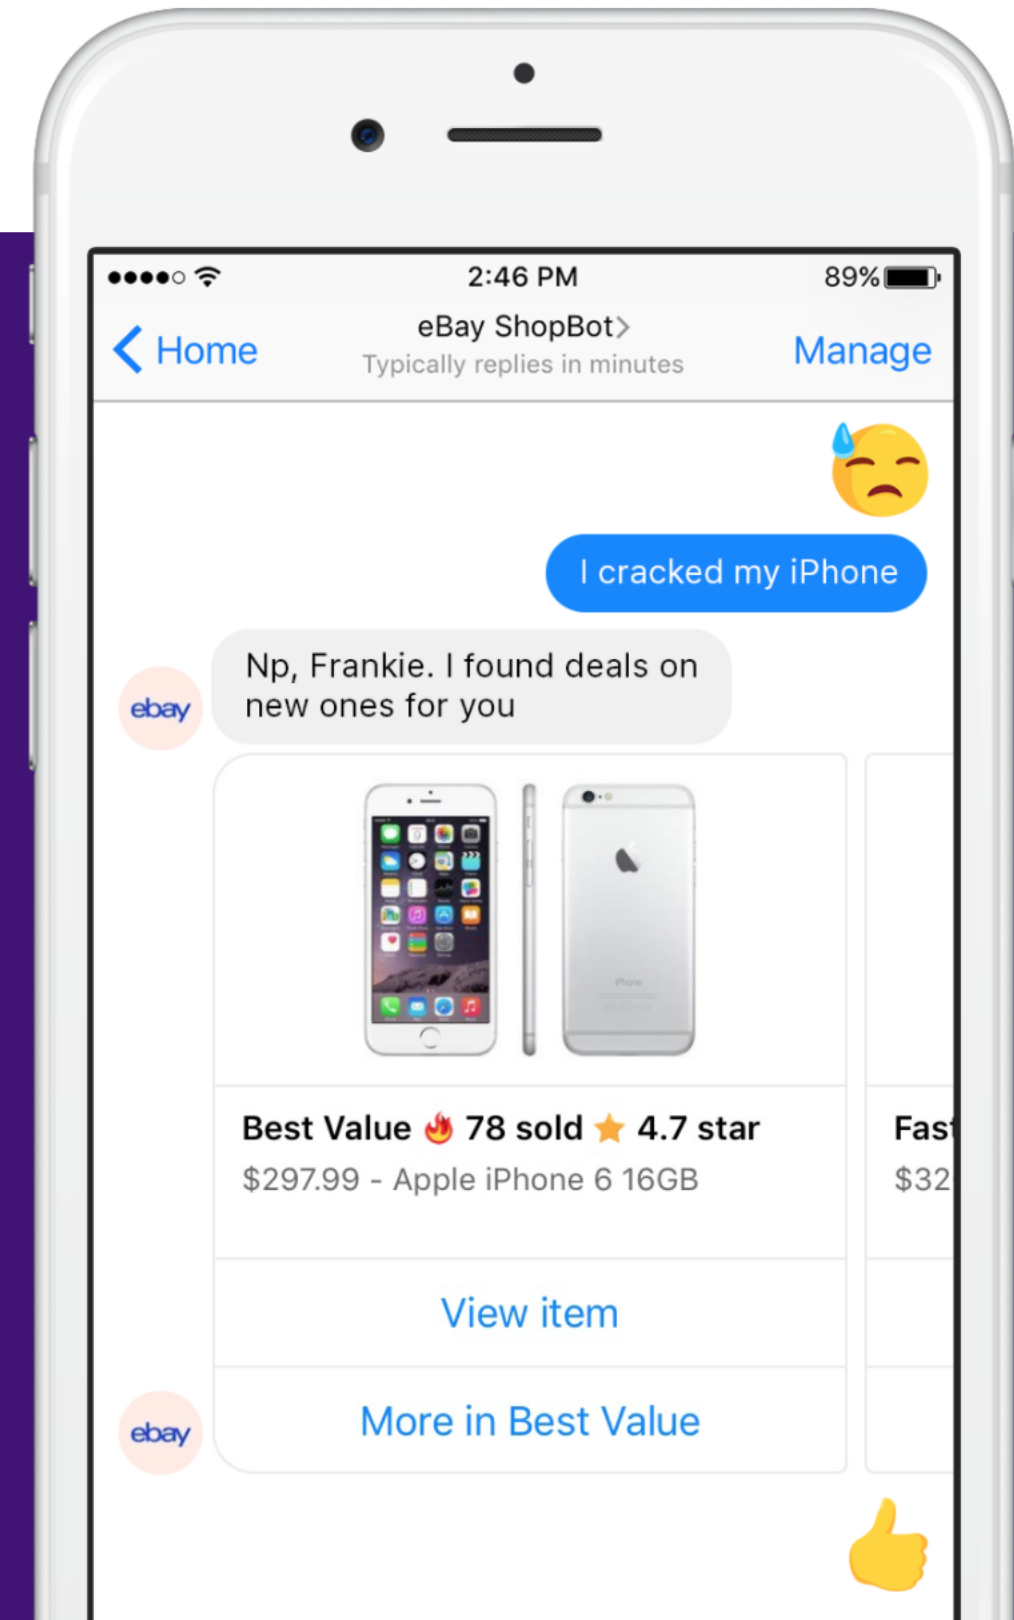

The new, effortless way to find deals

ShopBot is the new way to shop. It's as effortless as chatting with a friend in Facebook Messenger – Only this is a friend who works for you, a friend who knows your sizes, a friend who saves you money, gets your taste, finds you the best deals.

That's a hell of a friend.

 +  = Shopping Reinvented

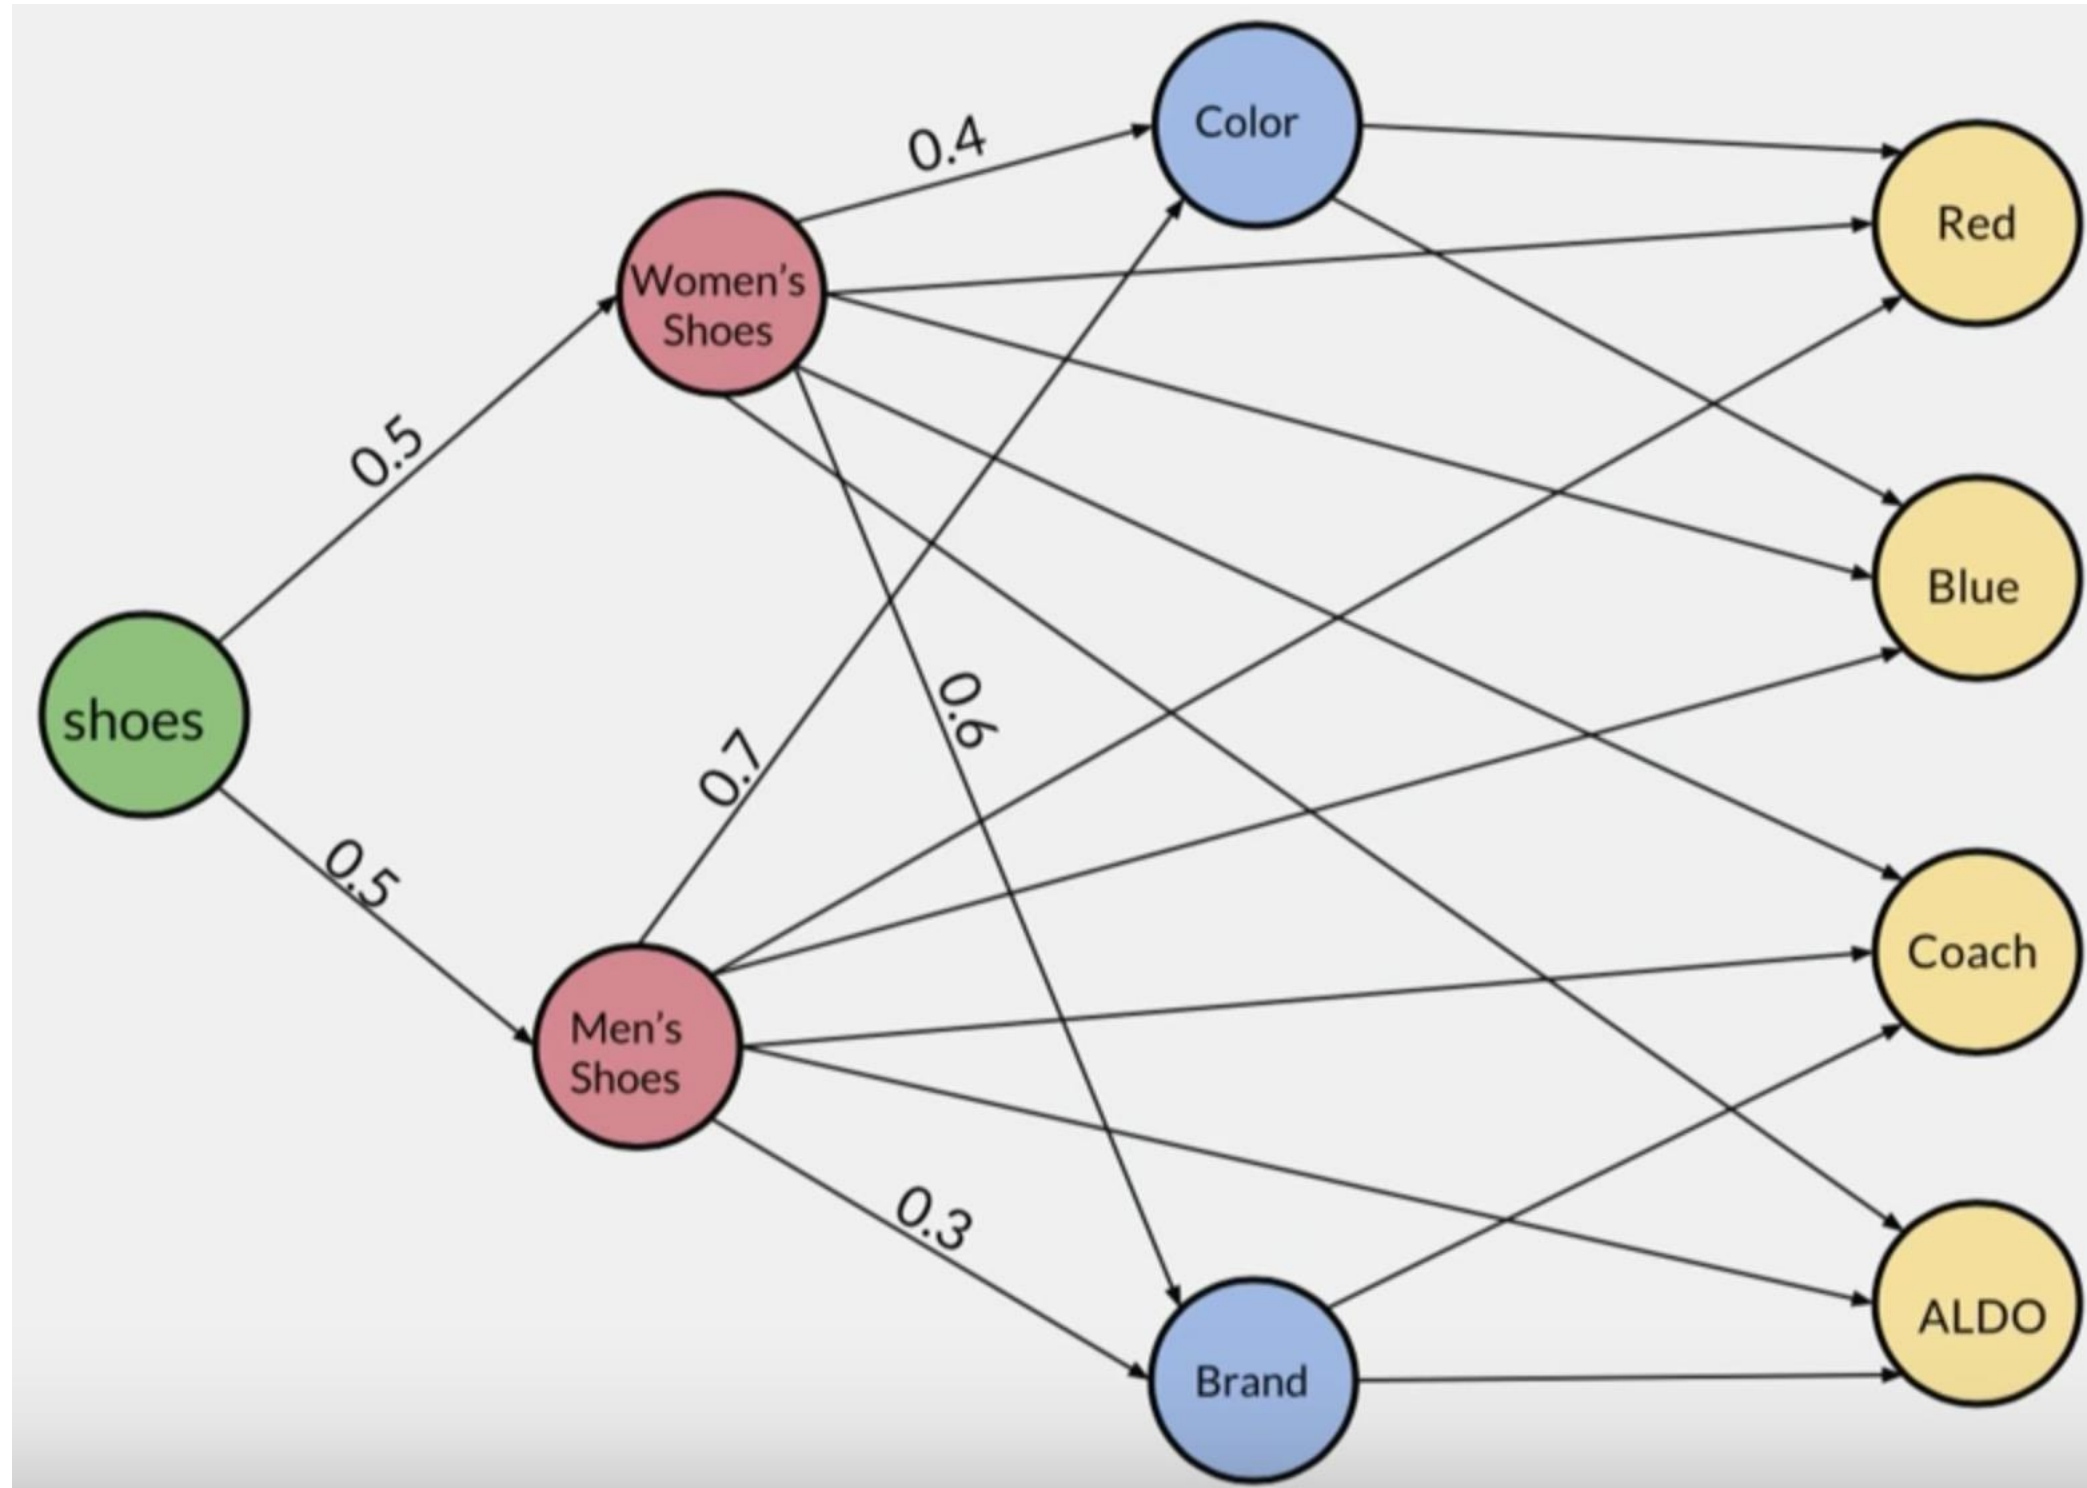

eBay Chat Bot

- There are many Bot Frameworks based on rules engines available
- Encoding rules engines with if-then-else rules may work fine for smaller data sets, but quickly becomes impractical at scale
- A probabilistic Knowledge Graph for inferencing (what question should the bot ask to narrow the recommendation?)
- Data on probabilities come from customer behavioral patterns (tons of data)
- Augment data with additional external datasets
- Machine Learning models to augment data
- ML model as a cache
- Curation to augment data

Mining the Knowledge Graph Reveals...

I am looking for the **eggplant foamposites**.

Color: Purple **Material: Foamposite**

Category: Athletic Shoes
Product: Eggplant Foamposite Sneakers
Brand: Nike
Style: Basketball Shoes
Release Date: 2009

Apply insights from Knowledge Graph to better infer intent

I am looking for the **eggplant** **iphone case**.

Color: Purple Product: Phone Case

The image illustrates a search intent analysis. On the left is a clear iPhone case with a pattern of pink eggplants and the word 'nope'. In the center, the text 'I am looking for the eggplant iphone case.' is shown with brackets under 'eggplant' and 'iphone case'. Below these brackets are the labels 'Color: Purple' and 'Product: Phone Case'. On the right is a solid purple OtterBox iPhone case, which is the inferred product based on the search intent.
